or

Use in conjunction with Brush Pile
Carrier - 92448 (white - centre leg) &
92449 (white - offset leg) (page 81)

Mighton Standard Balances

Available in two weight bands:

Balances are stocked in 1" increments from
8" to 51"

Standard Balances 10 - 40 lbs

Standard Colour - White / Brown PVC
covers available.

D4 D6

10-30lbs 30-40lbs

Requires a 17mm x 17mm groove in either frame or
window light.

If you wish to know the size of balance you require then
please phone us to send or fax you a copy of the Spiral
Balance Order Form to select the
ones you require.

Whilst we can calculate the weight
of glazed sashes automatically,
the customer should note that this
is at their own risk and it is more
prudent to give accurate glazed
weights at the time of ordering.

Mighton Assisted Balances

20 - 100lbs

Sash windows can be a problem when it comes to
opening and closing them with ease. The elderly or infirm
do not always have the strength to open even a light sash.

Mighton ASSISTED LIFT™ Spiral Balances should be
specified below 40lbs, instead of standard balances. This
type of balance is automatically supplied for sashes over
40lbs, providing a vital service to the householder by
dramatically reducing the effort or operating force needed
to raise the sash.

In practice, the sash weight is transferred to the
balance as the operator
applies his or her own
strength. With an ageing
population and in some
cases, with larger heavier
sash windows being
deployed, the Mighton
ASSISTED LIFT™ Spiral
Balance is the key to
ensuring easy operation.

All balances are sold in pairs with all fixing screws, brackets and adjustment tools and can be sent
direct to you usually within 1-2 days.
